REGISTERED COWS IN DHIA HERDS

Approximately 37 percent of the cows included in the Standard DHIA recordkeeping plan are registered with one of the various breed registry organizations.

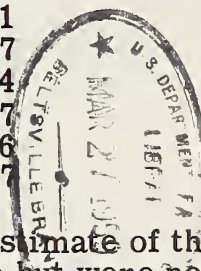

Estimates of the number of registered cows in DHIA herds are based on special reports obtained from the State Extension Dairymen.

According to these estimates the number of registered cows in DHIA herds by breed is as follows:

Ayrshire-----	22,306
Brown Swiss-----	21,521
Guernsey-----	108,017
Holstein-----	335,624
Jersey-----	73,717
Milking Shorthorn-----	6,006
Other-----	2,147

It was not possible to obtain an accurate estimate of the number of cows that were eligible for registration but were not registered. There was general agreement among State Extension Dairymen, however, that probably another 8 to 10 percent of the cows were eligible for registration. Thus, in addition to the above estimated number of registered cows, there are also approximately 125,000 cows eligible for registration in DHIA herds.

On the following page the estimated number of registered cows in DHIA herds is listed by breed, by State.

ESTIMATED NUMBER OF REGISTERED COWS IN DAIRY HERD-IMPROVEMENT
ASSOCIATIONS, BY BREED, BY STATES - NOVEMBER 1, 1958

DHIA PROVED-SIRE RECORDS TABULATED IN NOVEMBER 1958

Following is a list of 245 sires whose records were tabulated or retabulated by the Animal Husbandry Research Division in November 1958. Production records used in proving DHIA sires consist of 305-day lactation records standardized to a mature equivalent twice-a-day milking basis.

An asterisk at the end of a sire's registration number indicates a retabulated record. The asterisk may be followed by any number from 1 through 15 (i. e., *12) to indicate in which of the 15 printed lists his previous record appeared. Or the asterisk may be followed by the month and year (i. e., *May 51) of the DHIA letter in which his previous record appeared. Two asterisks following the sire's registration number, or following reference to a previous listing, indicate that the proved-sire tabulation or retabulation was requested by one of the States.

In case records from more than one herd were used, the reference is to the herd from which production records for the largest number of the sire's youngest daughters were reported. If the sire has been used in an artificial-breeding association, the name of the association is given.

Proved-sire records consisting of fewer than 10 comparisons are indicated as "preliminary proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

Proved-sire records consisting of fewer than 25 comparisons with daughters resulting from artificial breeding are indicated as "preliminary AB proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those of the dams or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparison.
